

SmartSupplies PMD

SmartSupplies

Planning, Materials and Distribution

Key Features and Benefits:

- Easy to use, fully web based
- Streamlines processes, increases employee efficiency and eliminates error prone paper based processes
- Integrates to ERP, IVR, CTMS, B2B partners and other SmartSupplies applications
- Allows for web-based shipment request and monitoring shipment status online
- Permits attachments of supporting documentation and diagrams throughout the system
- Replaces IVRS for low volume studies and maintains blinding throughout the process
- Maintains a comprehensive history of each treatment kit
- Provides regulatory control to prevent distribution to unauthorized countries and sites
- Manages QA lot release process in a highly-controlled environment
- Generates email notifications to support the workflow of key process steps
- Ensures 21 CFR Part 11 compliance with full audit trail and reporting with multiple electronic signature capabilities
- Provides group, user and program, trial, site, level security
- Supports LDAP authentication

SmartSupplies PMD (Planning, Materials and Distribution) is an easy to use, fully web based software solution that empowers life science organizations of all sizes to effectively plan, monitor, control and execute the clinical supplies process. SmartSupplies combines a protocol driven framework with intelligent MES and integration capabilities, resulting in a powerful business solution that eliminates the traditional challenges of managing a global clinical supply chain.

Process Control

The ability to control process is central to business success. SmartSupplies provides a central point of access for multiple functional areas to collaborate and control the investigational supplies process. SmartSupplies ensures that critical business checks and data validations are performed at each step in the process, preventing non-compliant situations from occurring.

Flexibility and Visibility

In today's cost containment environment, many organizations are choosing to outsource some or all of the manufacturing, packaging, labeling and distribution activities. Regardless of the organizational business model, SmartSupplies is the ideal choice. SmartSupplies provides a centralized, secure and compliant location to access and maintain essential information about the study supplies. The tightly coupled integration to ERP, IVR, CTMS and third party packagers/distributors provides unparalleled visibility of the clinical supplies data.
